

GUILLEM GARCIA

SENIOR DEVELOPER

guillemgarcia.co

ABOUT ME

I am a full-stack engineer with expertise in **TypeScript**, **Go**, **Python** and frameworks like **Next.js**, **Express** and **Gin-Gonic**.

I have experience building scalable backend systems, developing APIs in **AWS** and **Cloudfare**, and working with front-end technologies like **React**, **VanillaJS** and **htm.x**. I have experience in serverless **Postgres** and **SQLite** databases.

EDUCATION

Institut Montilivi - DAW (web development apprenticeship)

Computer Science

2016 - 2018 / Girona, Spain

Completed a two-year apprenticeship in computer science and web application development

PERSONAL PROJECTS

Spiral Pricing

spiral-pricing.com

I built spiral pricing to help LATAM ecommerce sellers have better insights on their competitors. I migrated many PHP services to Node.js and Go microservices. The project includes features such as price tracking and sales metrics, all done using Reactjs as the front end and a combination of Node.js and Go on the backend.

oristic pro

ditec.es/medical/oristic-pro/

My first big project as a software engineer. We used react js and expressjs to let the user manage video and audio signals of the operating room and control audio equipment. Medical software requires a strict battery of tests, so I learned a lot about how to make resilient solutions.

sira

github.com/alarbada/sira

Small go cli utility that I use every day. It is a wrapper around openai gpt API, which lets you execute markdown files as if they were chatgpt conversations. Think of it as a local llm playground. It might be very simple, but has greatly improved my chatgpt flow, as I don't need to have a lost tab in chrome holding the chatgpt window, I just have text files that I can edit really fast with my neovim config.
